

The Practice Audit Workbook

Goal: by the end of this worksheet you'll know exactly which admin tasks eat your week, what each one costs you in dollars, and which ONE to automate first. Print this or fill it alongside the Leak Calculator spreadsheet (included).

Step 1 - Inventory every recurring non-billable task

For seven days, every time you do something a client doesn't pay for, log it below. Be honest about minutes -- everyone underestimates by half.

Task (what you actually did)	Times/wk	Min each	Min/wk

Common ones to jog memory: writing welcome/kickoff emails, chasing a quiet lead, scheduling ping-pong, building status updates, collecting client docs/access, invoicing chasing, re-explaining your process on calls.

Step 2 - Price the leak

Take your three biggest line items from Step 1 and run the math (the spreadsheet does this automatically):

WEEKLY COST = (minutes per week / 60) x your billable rate

ANNUAL COST = weekly cost x 48 working weeks

Example: follow-up chasing, 150 min/wk at \$150/hr

= 2.5 hrs x \$150 = \$375/wk = \$18,000/yr ... for ONE task

Top 3 time-sinks	Hrs/wk	\$/week	\$/year

Step 3 - Pick your Week 2 build

Score each of your top 3 against these four questions (1-5 each, 20 max). Highest score = the one we automate in Week 2.

- FREQUENCY - does it happen weekly or more? (more often = higher score)
- RULES - could you write the steps on an index card? (more repeatable = higher)
- DELAY DAMAGE - does doing it late lose you money or trust? (more damage = higher)
- DREAD - do you put it off? (more dread = higher; dread = backlog = leak)

Candidate task	Freq	Rules	Damage	Dread	TOTAL

Your Week 1 deliverable

- ☐ My total weekly leak is ____ hours = \$____ per year.
- ☐ The ONE task I'm automating in Week 2 is: _____
- ☐ Text a photo of this page to (863) 209-7940 -- I'll sanity-check your pick before the Week 2 session.
