

The Lead Follow-Up Engine

What this builds: every inquiry that doesn't book gets followed up automatically on Day 1, Day 3, and Day 7 -- then stops the moment they reply or book. Cost: \$0. Stack: Google Forms + Google Sheets + Apps Script (all in the Workspace you already pay for). Build time: about 60 minutes.

How it works

```
Inquiry (form / email / missed call you log)
-> row in Google Sheet (status: NEW)
-> Day 1: friendly check-in email sent automatically
-> Day 3: value-add follow-up sent automatically
-> Day 7: clean break-up email sent automatically
-> they reply or book -> you mark one cell -> engine stops
```

Part 1 - The intake (10 min)

- 1 Create a Google Form: Name, Email, Company, 'What do you need help with?' (paragraph), 'How urgent?' (choices). Keep it to 5 questions -- every extra field costs you leads.
- 2 In the Form: Responses tab -> link to a new Google Sheet. Name it 'LEAD ENGINE'.
- 3 Put the form link on your website, email signature, and LinkedIn profile. Anyone who calls or DMs: paste their info straight into the Sheet -- the engine treats manual rows the same.
- 4 In the Sheet, add three columns to the right of the form columns: STATUS, LAST_TOUCH, NOTES. Set STATUS to NEW for every row.

Part 2 - The engine (20 min)

- 1 In the Sheet: Extensions -> Apps Script. Delete the placeholder and paste the script on the next page.
- 2 Edit the CONFIG block: your name, your booking link, your signature.
- 3 Run setup() once (it asks for permissions -- approve; it's your own account emailing from your own address).
- 4 That's it. The engine checks daily and sends the right touch to anyone still in NEW.

The script (paste whole thing)

```
var CONFIG = {
  SHEET: "Form Responses 1",    // tab name with your leads
  EMAIL_COL: 3,                // column number of the email field
  NAME_COL: 2,                 // column with their name
  STATUS_COL: 8,               // your STATUS column
  TOUCH_COL: 9,                // your LAST_TOUCH column
  YOUR_NAME: "Keenan",
  BOOK_URL: "YOUR-BOOKING-LINK",
  SIGN: "Keenan - (863) 209-7940"
};

function setup() {
  ScriptApp.newTrigger("runEngine").timeBased().everyDays(1).atHour(9).create();
  runEngine();
}

function runEngine() {
  var sh = SpreadsheetApp.getActive().getSheetByName(CONFIG.SHEET);
  var data = sh.getDataRange().getValues();
  var now = new Date();
  for (var r = 1; r < data.length; r++) {
    var status = String(data[r][CONFIG.STATUS_COL - 1]).toUpperCase();
    if (status !== "NEW" && status !== "T1" && status !== "T2") continue;
    var created = new Date(data[r][0]);
    var days = (now - created) / 86400000;
    var email = data[r][CONFIG.EMAIL_COL - 1];
    var name = String(data[r][CONFIG.NAME_COL - 1]).split(" ")[0];
    if (status === "NEW" && days >= 1) send(email, name, 1, sh, r);
    else if (status === "T1" && days >= 3) send(email, name, 2, sh, r);
    else if (status === "T2" && days >= 7) send(email, name, 3, sh, r);
  }
}

function send(email, name, touch, sh, r) {
  var subj, body;
  if (touch === 1) {
    subj = "your note to " + CONFIG.YOUR_NAME.toLowerCase();
    body = "hey " + name + " - saw your message come in. happy to help.\n\n" +
      "easiest next step is a quick call - grab a time here: " + CONFIG.BOOK_URL +
      "\n\nor just reply with what you're dealing with and I'll point you straight.\n\n" + CONFIG.SIGN;
  } else if (touch === 2) {
    subj = "quick thought for you";
    body = "hey " + name + " - while you decide, one thing worth checking today: " +
      "make sure MFA is enforced on every admin account you have. takes 10 minutes, " +
      "blocks the most common breach we see.\n\nwhen you want a deeper look: " + CONFIG.BOOK_URL + "\n\n" +
    CONFIG.SIGN;
  } else {
    subj = "closing your file";
    body = "hey " + name + " - haven't heard back so I'll close this out and stop emailing.\n\n" +
      "if timing was just bad, the door's open: " + CONFIG.BOOK_URL + "\n\n" + CONFIG.SIGN;
  }
  GmailApp.sendEmail(email, subj, body);
  sh.getRange(r + 1, CONFIG.STATUS_COL).setValue(touch === 3 ? "DONE" : "T" + touch);
  sh.getRange(r + 1, CONFIG.TOUCH_COL).setValue(new Date());
}
```

```
}
```

Part 3 - The rules that make it work

- The moment someone replies or books: change their STATUS to WON or DEAD. The engine ignores anything that isn't NEW/T1/T2.
- Edit the three email bodies to sound like YOU. The structure stays: Day 1 = easy next step, Day 3 = free value, Day 7 = clean break-up.
- Never add a 4th, 5th, 6th touch. Three is the sweet spot -- past that you're training people to ignore you.
- Test it on yourself first: submit your own form, set the row's timestamp back a day, run runEngine() manually, check your inbox.

Week 2 deliverable: this engine live, with one real or test lead pushed all the way through Touch 1. Text me a screenshot -- (863) 209-7940.
