

The Client Onboarding Engine

What this builds: the moment a client says yes, they get a branded welcome email, a doc-collection checklist, and a kickoff booking link -- and you get a tracking row and a Drive folder -- without you touching anything. Cost: \$0. Build time: about 60 minutes. Pick THIS guide if onboarding scored higher than follow-up in your Week 1 audit.

How it works

You mark a deal WON (one cell in a Sheet)

- > client gets Welcome email + what-happens-next
- > client gets the intake checklist (docs/access you need)
- > kickoff call link included (they book themselves)
- > Drive folder created + named for the client
- > you get a ping that it all fired

Part 1 - The pieces (15 min)

- 1 Make a Google Sheet 'CLIENT TRACKER' with columns: Client, Contact name, Email, Deal value, STATUS, KICKOFF, FOLDER.
- 2 Write your intake checklist ONCE (the 5-10 things you always need: VPN access, asset list, policies, points of contact...). Keep it in the script below.
- 3 Set up a booking page for kickoff calls: calendly.com (free tier) or Google Calendar appointment schedules.

Part 2 - The script (20 min)

Sheet -> Extensions -> Apps Script -> paste -> edit CONFIG -> run setup() once -> approve permissions.

```
var CONFIG = {
  SHEET: "Sheet1",
  CLIENT_COL: 1, CONTACT_COL: 2, EMAIL_COL: 3,
  STATUS_COL: 5, FOLDER_COL: 7,
  KICKOFF_URL: "YOUR-BOOKING-LINK",
  PARENT_FOLDER: "YOUR-DRIVE-FOLDER-ID", // folder that holds client folders
  YOUR_NAME: "Keenan", SIGN: "Keenan - (863) 209-7940",
  CHECKLIST: [
    "Signed agreement (if not already back)",
    "Primary + secondary technical contact",
    "Asset inventory or network diagram (whatever exists)",
    "Current security policies (or tell us there are none - that is fine)",
    "Read-only access we agreed on (VPN / M365 / cloud console)"
  ]
};

function setup() {
  ScriptApp.newTrigger("watchWins").timeBased().everyMinutes(30).create();
}

function watchWins() {
  var sh = SpreadsheetApp.getActive().getSheetByName(CONFIG.SHEET);
  var data = sh.getDataRange().getValues();
  for (var r = 1; r < data.length; r++) {
```

```

if (String(data[r][CONFIG.STATUS_COL - 1]).toUpperCase() != "WON") continue;
var client = data[r][CONFIG.CLIENT_COL - 1];
var name = String(data[r][CONFIG.CONTACT_COL - 1]).split(" ")[0];
var email = data[r][CONFIG.EMAIL_COL - 1];
var folder = DriveApp.getFolderById(CONFIG.PARENT_FOLDER)
    .createFolder(client + " - " + new Date().getFullYear());
var list = CONFIG.CHECKLIST.map(function(x, i){return (i + 1) + ". " + x;}).join("\n");
GmailApp.sendEmail(email,
    "welcome aboard, " + name + " - here is everything you need",
    "hey " + name + " - great to have " + client + " on board.\n\n" +
    "two quick things and then we are moving:\n\n" +
    "1) book your kickoff call: " + CONFIG.KICKOFF_URL + "\n\n" +
    "2) gather these when you can (reply to this email with them):\n" + list + "\n\n" +
    "from kickoff we typically have first findings inside two weeks.\n\n" + CONFIG.SIGN);
sh.getRange(r + 1, CONFIG.STATUS_COL).setValue("ONBOARDING");
sh.getRange(r + 1, CONFIG.FOLDER_COL).setValue(folder.getUrl());
GmailApp.sendEmail(Session.getActiveUser().getEmail(),
    "onboarding fired: " + client, "welcome sent, folder created: " + folder.getUrl());
}
}

```

Part 3 - Make it yours

- Rewrite the welcome email in your voice. Keep the shape: warm open -> book kickoff -> checklist -> what happens next.
- Put YOUR real checklist in CONFIG -- this is the part clients feel. A tight checklist says 'this person has a process.'
- Test with a fake client row set to WON. Check the email, the folder, and the notification before a real client touches it.

Week 2 deliverable: one automation live (this OR the Follow-Up Engine). Text me a screenshot -- (863) 209-7940.
