

The Implementation Plan

You've seen the full Security Practice OS demo (video included with this kit). This template turns the demo into YOUR rollout plan -- whichever path you choose.

Scorecard: where are you after 3 weeks?

System	Live? (Y/N)	Hours saved/wk	What's missing

Rows to fill: Intake / Follow-up / Booking / Onboarding / Reporting.

Path 1 - Finish it yourself

- Build the second engine from Week 2 (the guide you didn't use).
- Add reporting: a monthly 'what we did' email per client. Start manual (30 min/client), automate later.
- Calendar-webhook the BOOKED handoff (Calendly -> Apps Script web app) so the engine stops on booking without you flipping the cell.
- Budget: 2-4 more weekends. Totally doable with what you now know.

Path 2 - We build the rest, done-for-you

The full Security Practice OS: every system above as one multi-tenant platform -- branded to your practice, leads followed up in minutes (not days), proposals generated from your templates, client dashboard, monthly optimization included.

- \$3,500 build, live in 2 weeks + \$497/mo Security Practice Optimization
- 7-day FREE trial first -- you watch it run on your real leads before paying a dollar
- Your challenge fee credits toward the build (\$97 off -- you finished, you earned it)

The honest math for Path 2

Your Week 1 audit said you leak \$_____/year (most consultants: \$15-40K).

The build: \$3,500 once + \$5,964/yr.

If the OS recovers HALF your leak + one extra closed client per year,

it pays for itself several times over. Run your own numbers - then decide.

Book the decision call (15 min, no pitch if it's not a fit): text BUILD to (863) 209-7940 or email keenan@bluehippocyber.com.

Either path: you're leaving this challenge with a system, a map, and the skills to keep going. That was the deal.

Thanks for building with me. - Keenan
